

Clinical Note

Patient Name: Jane Smith **Date:** [Current Date]

Subjective: The patient presents with a chief complaint of acute knee pain sustained yesterday while playing soccer. She reports the pain severity as an 8/10.

Objective:

- **Musculoskeletal:** Examination of the affected knee reveals [specific exam findings would go here, e.g., swelling, decreased range of motion].

Assessment:

- Acute knee injury.
- **Rule out:** Anterior Cruciate Ligament (ACL) tear.

Plan:

- **Imaging:** Urgent MRI of the knee requested to evaluate for ligamentous injury.
- **Follow-up:** Review imaging results immediately upon completion.
